

Oscar Eduardo Ochoa Velasco

Game Engineer

Professional Summary

Game Engineer with experience developing and maintaining commercial live-service games across Unity and Roblox for Android, iOS, Windows, macOS, Steam and NEX. Specialized in gameplay systems, game flow architecture, scalable UI systems, frontend integration with backend services, and custom Unity editor tools.

Experienced collaborating with multidisciplinary teams to deliver maintainable, production-ready features using Agile methodologies.

Professional Experience

Unity Developer in KO Amber Studio

September 2025 - July 2026

- Designed and implemented modular gameplay systems, game flow architecture, and scalable UI systems.
- Developed frontend features integrated with backend-driven live-service systems.
- Created custom Unity editor tools and inspector enhancements to improve designer workflows.
- Worked with Addressables, UniTask, Steamworks SDK, and Jenkins CI/CD as part of the project's development workflow.
- Collaborated with designers, artists, QA, and backend engineers to deliver production-ready features.
- Improved production quality through bug fixing, gameplay polish, and AI-assisted development.

Lead Roblox Engineer in Amber Studio

October 2024 - September 2025

- Led gameplay development across multiple Roblox projects.
- Mentored developers in Lua and Roblox Studio.
- Reviewed architecture and code quality.
- Developed scalable gameplay systems and UI.
- Collaborated with multidisciplinary teams.

Roblox Developer Intern in Amber Studio

August 2024 - October 2024

- Developed gameplay features and UI.
- Fixed bugs and documented systems.

Released Games

- MOTU: Skeletor – Until Next Time (Android, iOS)
- Hungry Hangry Doodles (Windows, macOS • Steam)
- Unicorn Academy: Friendship Adventures (NEX Playground)
- Squish'Ems - Drop and Pop! (Android, iOS)
- Brandcade Jetpack Simulator (Roblox)
- Maestro de la Pelota (Roblox)
- OnixLand (Roblox)

Open Source

Unity Persistent Data (Unity Package) | 2026

- Developed an open-source Unity Package Manager (UPM) package for lightweight local data persistence using PlayerPrefs and JSON serialization.
- Includes documentation, semantic versioning, GitHub releases, and a playable sample.
